

Do you put the right strength on your grip ???

Hu hu hu(panting) · gripping the dog leash all the time when walking ...

The overwhelming majority of people can't grip tight for long, because put the strength of wrong region to pull

Many people have the problem when walking the dog with a leash, sometimes dog will try hard to pursue some objects which make the dog feel curious.

Our hands have natural weak strength of congenital deficiency that's due to small bones and tiny muscles, and it's the reason why the most of us can not grip something for long,

When we suffer from kind of unexpected and vigorous pull , our hands do not have enough power to grip the leash tightly and keep the dog not run away, additionally we always put the only hand's strength on gripping, and then we may try our best to grip the leash , finally having no choice to be dragged when the pulling power can not be taken.

We need this product to protect our hands from that unexpected situation. In addition, we need it in normal situation to reduce pressure of hands.

Leashes provide a clear method of communication and ensure control during walking of dogs, Having the dog wear a leash is a way of protecting the dog and other persons on the street. When walking the dog in crowded places they can get easily confused and lost or they could be involved in car accidents. Also, crowded places might cause them distress which might result in attacking a person. Therefore , the answer is that you need to get a safe grip for the good control of walking your dog first .

PS. It's important part of buckle that remains clearance and keep the wrist decorations or others away from the buckle, avoiding to block the strap releasing

The reasons why we should use EFFECT EaseGrip

For long time , we are probably not conscious of many pulls & tugs on our fingers, Palm, and wrist, but it can be a cause of joint damage and may develop chronic harm.

Our hand includes fingers, palm and wrist and is composed of many small delicate bones and joints. Our hands can help us to do many complicated and skillful actions in daily life These are executed by the contraction of many tiny muscles in our hands.

Our hands play a big part in our daily life, especially gripping something. However, our hands are so delicate and the muscles so tiny that they are very easily to damaged; therefore, it is very important to protect our hands.

Put the right strength on

Dog can not talk but take the action only when needs, loving your dog and going to protect your dog , other people on the street and yourself.

Let the right strength to work, using EFFECT EaseGrip that you can free your fingers, palm and wrist from pressure and more strength of your whole arm to take care your dog in the good control !! .
