

A photograph showing a stream of water falling from the top left into a large, dark, conical pile of charcoal powder. The powder is very fine and dark, creating a sharp contrast with the white background. The water is captured in motion, creating a blurred vertical line.

Features of Antibacterial Bamboo Charcoal Fiber

(A) **Release Far Infrared Ray**

The charred bamboo can release far infrared ray to stimulate blood circulation and keep body temperature.

(B) **Emit Anion**

The added bamboo charcoal powder can emit good anion to make people healthy.

(C) **Regulate Humidity**

The micro holes of the charred bamboo can regulate humidity effectively.

(D) **Antibacterial and Deodorizing Ability**

The antibacterial material mixed in the fiber can effectively restrain the growth of bacterial to reduce the stink.
